GENERAL REQUIREMENTS

SECTION 00010 - Delete this section in its entirety and replace with the attached like pages.

SECTION 01025 - Delete this section in its entirety and replace with the attached like pages.

TECHNICAL REQUIREMENTS

SECTION 02220-1, PARAGRAPH 1.1.1 - Add the phrase "access road embankment," to the fourth line before the word 'and'.

SECTION 02220-11, PARAGRAPH 3.3.3 - Add the phrase "access road embankment," to the third line before the word 'and'.

SECTION 02220-10, PARAGRAPH 3.3.1 - Delete this paragraph in its entirety and replace with the following:

"3.3.1 General. No fill shall be placed on any part of the embankment foundation until such areas have been inspected and approved. Construction of the earthen embankment dam shall begin at its contact with the spillway structure and proceed toward the opposite abutment. The fill shall have a decreasing 1 per cent slope from the spillway structure to the opposite abutment until the embankment dam is completed. During placement of the embankment dam, the Contractor shall place fill a minimum of 20 hours per day, 6 days per week. Backfill shall not be placed against concrete that has not reached its design strength. The gradation and distribution of materials throughout the compacted earth fill section of the dam shall be such that the embankment will be free from lenses, pockets, streaks, and layers of material differing substantially in texture or gradation from surrounding material of the same class. Successive loads of material shall be dumped at locations on the fill as directed or approved by the Contracting Officer. No fill shall be placed upon a frozen surface, nor shall snow, ice, or frozen earth be incorporated in the embankment. During all phases of embankment placement, the Contractor shall control surface water. Layers shall be started full out to the slope stakes and shall be carried out substantially horizontal and parallel to the embankment dam centerline with sufficient crown or slope to provide satisfactory drainage during construction. In no case shall the fill be sloped in such a manner as to result in water draining toward completed portions of sand backfill around the outlet works or the pervious toe drain. Should water become ponded on the surface of any portion of the fill, the Contractor shall effect its removal within four hours after the Contracting Officer determines such remedial measures can be successfully undertaken. All compacted material within such a ponding area found to have an in-place moisture or density not corresponding to that required by these specifications shall be reworked and/or replaced to the extent necessary to ensure a suitable fill, all as determined by the Contracting Officer. The removal of ponded water and the reworking and/or replacement of any fill found to be unacceptable with respect to in-place moisture and/or density shall be accomplished at no additional cost to the Government."

SECTION 02225 - Delete this section in its entirety and replace with the attached like numbered section.

SECTION 02830 - Delete this section in its entirety and replace with the attached like numbered section.
